## The Gap between Hype and Reality

**DoD Enterprise Architecture Conference**  
**June 1-4, 2009**

*Provide C&A Services*

## Thesis

- IT is a victim of fashion
- Every year there's something new
  - SaaS, SOA, RIA, Web 2.0, Enterprise 2.0
  - This year it's Cloud Computing
- Beware of vendors selling snake oil
  - Exploiting the latest fad
- Each new fad can bring real value
  - But nothing comes for free
  - Many people never realize significant benefits
- Technology is mostly irrelevant
  - What matters is how you use it

@hugh

## Agenda

- The nature of fashion
- Fashion in the IT world
- The next “Big Thing”
- Facing reality
- Bridging the gap

## The Nature of Fashion

## Social epidemics

- Fads act like outbreaks of infection diseases
  - Behavior is contagious
- They sweep through quickly
  - Triggered by little things
- They die out equally fast
  - Replaced by the next “Big Thing”

# Fashion in the IT World

## Some recent "Big Things"

- Enterprise 2.0
- Service Oriented Architecture

## New approach to collaboration

- Web 2.0 in the enterprise
  - Blogs, wikis, social networking
  - Classonomies, mashups
  - Architecture of participation
- Synthesis of new technologies, models, processes, mindsets
- "Revolutionize" the way business is conducted
  - Enable better sharing
- Attract and retain Gen-Y talent
  - Email is for grandparents

### HOW TO USE WEB 2.0 IN THE ENTERPRISE

PART 1:  
COMMUNICATE WITH YOUR EMPLOYEES

## Culture – not technology

- Requires participation
  - Technology doesn't do it
- Out of their comfort zone
  - Baby boomers
  - Gen-X

## Efficiency risks

- Information overload
- Distraction

## Security risks

- Information management
- Privacy concerns

NORMAN ROCKWELL  
High Dive

# Service Oriented Architecture

Increase agility

Align IT and business

Reduce costs

Gain competitive advantage

Buy this!

- ESB
- Registry/repository
- Runtime governance
- Security appliances
- Army of consultants
- Presto:

**Successful SOA**

# SOA Realities

I thought SOA would *solve* our interop problems

No one wants to build services

Our services aren't being reused

Systems are more fragile

Costs are higher

## Deep investigation into the status of SOA initiatives

- Goal: Identify patterns and commonalities
- Found: A very sorry situation
- Most SOA initiatives stall within 18 months:
  - “If we build it they will come” methodology doesn’t work
  - The business won’t engage

## SOA Fatigue was setting in

- Prevailing attitude:
  - SOA costs a lot and doesn’t deliver

burton  
GROUP™

# SOA Obituary

[SOA](#) met its demise on January 1, 2009, when it was wiped out by the catastrophic impact of the economic recession.

SOA is survived by its offspring: mashups, SaaS, Cloud Computing, BPM, and all other architectural approaches that depend on "services".

Middleware Market Hits the Brakes in 2009
By Herb Torrens • 05/08/2009
The middleware software market has entered the slow lane in 2009, according to a Gartner report announced on Wednesday.
The report, "Market Share: Application Infrastructure and Middleware Software, Worldwide, 2008," examines the AIM market, which includes technologies such as service-oriented architecture (SOA) solutions, business process management suites (BPMSs) and other integration software.

"Middleware Market Hits the Brakes in 2009" (http://bit.ly/19JDYw): jk--But says CEP growing. What Forrester calls Really Urgent Analytics
reply | re-tweet

## A Tragic Loss

## Reduce complexity and redundancy

- Architectural principles
  - Service-orientation
  - Separation of concerns
  - Loose coupling
- Required for
  - BPM
  - Mashups
  - SaaS
  - Cloud

SOA runs through it

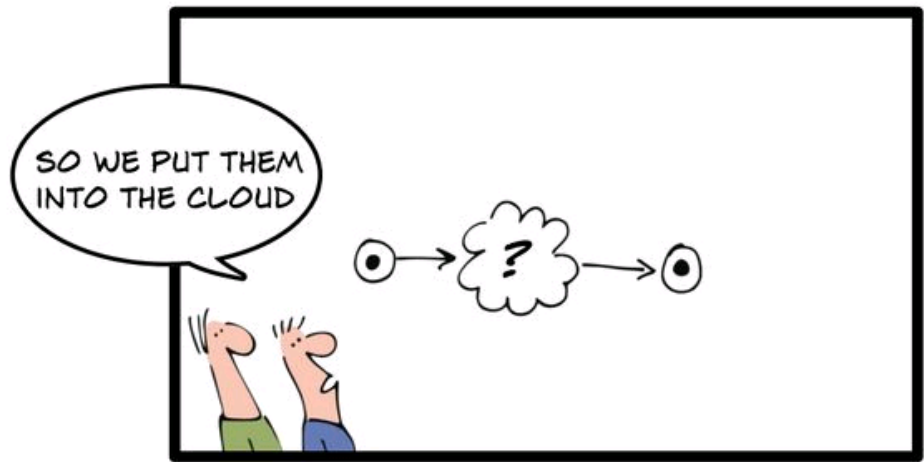

## The Next “Big Thing”

## Ready-to-Eat IT

- Low-cost rental alternative
  - “Elastic” data center
  - Hosted platforms
  - SaaS
- Mouth watering benefits
  - Rapid time to value
  - Try before you buy
  - Pay as you go
  - Satisfies the thirst for new capabilities
  - Creates sparks of innovation

LET THE CLOUDS MAKE YOUR LIFE EASIER

A dramatic landscape photograph featuring a dirt road that recedes into the distance on the left side. The road is flanked by a fence and leads towards a horizon line. The sky is filled with heavy, dark, and textured clouds, suggesting an approaching storm. A bright light source, likely the sun, is visible near the horizon, creating a strong contrast and illuminating the lower part of the clouds. The overall mood is somber and intense.

Cloud computing  
does not give  
organizations the right to  
abdicate responsibility

Clouds can be dangerous.....

## Security and Contractual Risks

- Methodologies and Best Practices “Considerations for Risk Management When Choosing Software as a Service”
  - Confidentiality – the disclosure of inappropriate information
  - Integrity – Unauthorized or inappropriate changes
  - Use control – Internal and vendor staff ability to download, copy, or distribute sensitive information
  - Availability – operational and security related issues leading to unavailability of systems, networks, applications, and information
- What happens when...
  - The contract ends?
  - The vendor disappears (*can you say escrow*)?
  - Breaches and operational issues emerge?
  - You provide applications to your customers or partners?

# Legal Protections?

## Who is at Risk?

YOU EXPRESSLY UNDERSTAND AND AGREE THAT YOUR USE OF THE SERVICE IS AT YOUR SOLE RISK AND THAT THE SERVICE IS PROVIDED "AS IS" AND "AS AVAILABLE."

YOU EXPRESSLY UNDERSTAND AND AGREE THAT GOOGLE, ITS SUBSIDIARIES AND AFFILIATES, AND ITS LICENSORS SHALL NOT BE LIABLE TO YOU FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL CONSEQUENTIAL OR EXEMPLARY DAMAGES WHICH MAY BE INCURRED BY YOU, HOWEVER CAUSED AND UNDER ANY THEORY OF LIABILITY. THIS SHALL INCLUDE, BUT NOT BE LIMITED TO, ANY LOSS OF PROFIT (WHETHER INCURRED DIRECTLY OR INDIRECTLY), ANY LOSS OF GOODWILL OR BUSINESS REPUTATION, ANY LOSS OF DATA SUFFERED, COST OF PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES, OR OTHER INTANGIBLE LOSS.

You agree to hold harmless and indemnify Google, and its subsidiaries, affiliates, officers, agents, employees, advertisers, licensors, suppliers or partners, (collectively "Google and Partners") from and against any third party claim arising from or in any way related to (a) your breach of the Terms, (b) your use of the Service, (c) your violation of applicable laws, rules or regulations in connection with the Service, or (d) your Content or your Application, including any liability or expense arising from all claims, losses, damages (actual and consequential), suits, judgments, litigation costs and attorneys' fees, of every kind and nature. In such a case, Google will provide you with written notice of such claim, suit or action.

If the users provide you with user names, passwords, or other login information or personal information, you must make the users aware that the information will be available to your application and to Google"

"Google reserves the right (but shall have no obligation) to pre-screen, review, flag, filter, modify, refuse or remove any or all Content from the Service. "

"You agree that Google has no responsibility or liability for the deletion or failure to store any Content and other communications maintained or transmitted through use of the Service."

Source: <http://code.google.com/appengine/terms.html>

## Service level agreements (SLAs)

- Security audits, certification of operational controls
- Service escrow
- Regulatory compliance
- Financial remunerations for non-compliance

## Integration Issues

- Land-locked information
  - Information models convenient to the vendor
  - Unavailability of logical models
  - Semantic mappings
  - Extracts and transports
  - Data access services
- Cross-functional processes and workflows
  - Accepting the software and processes as supplied
  - Limited capability to customize
- Including operational statistics in your IT dashboard

Facing  
Reality

"Technology alone is rarely the key to unlocking economic value: companies create real wealth when they combine technology with new ways of doing business."

*Source: "Eight Business Technology Trends to Watch, McKinsey Quarterly December 2007"*

## Technology != Change

People and Process must change to produce a new result

## Bridging the Gap

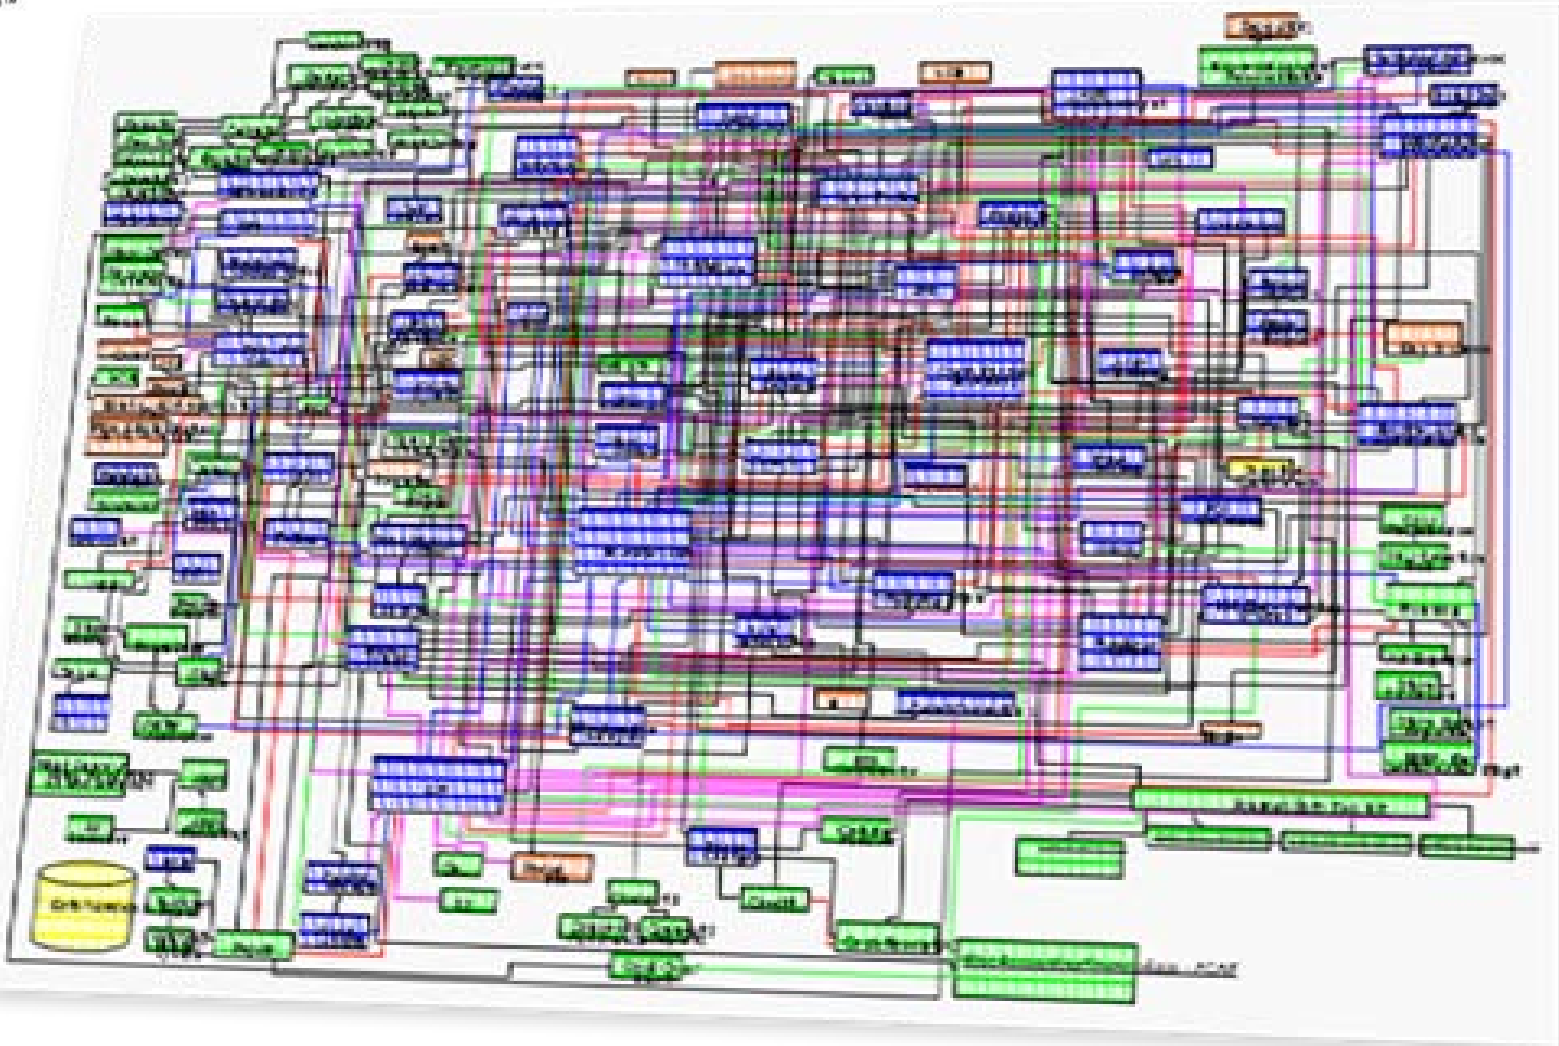

## IT is broken – not a valuable contributor

- Discontent with application delivery organization:
  - Projects are late, over budget, not what was wanted [desired/needed]
  - Application portfolio bloat, massive backlog
  - App dev is viewed as unresponsive (if not incompetent)
- Shifting the load
  - Offshoring and/or outsourcing
  - COTS, SaaS, Cloud
- "Same mess for less"

The current state of our systems

# Rearchitecture is the Key

35

Change is mandatory

# Medieval Architecture

burton  
GROUP™

burton  
GROUP™

# Chaos to Order

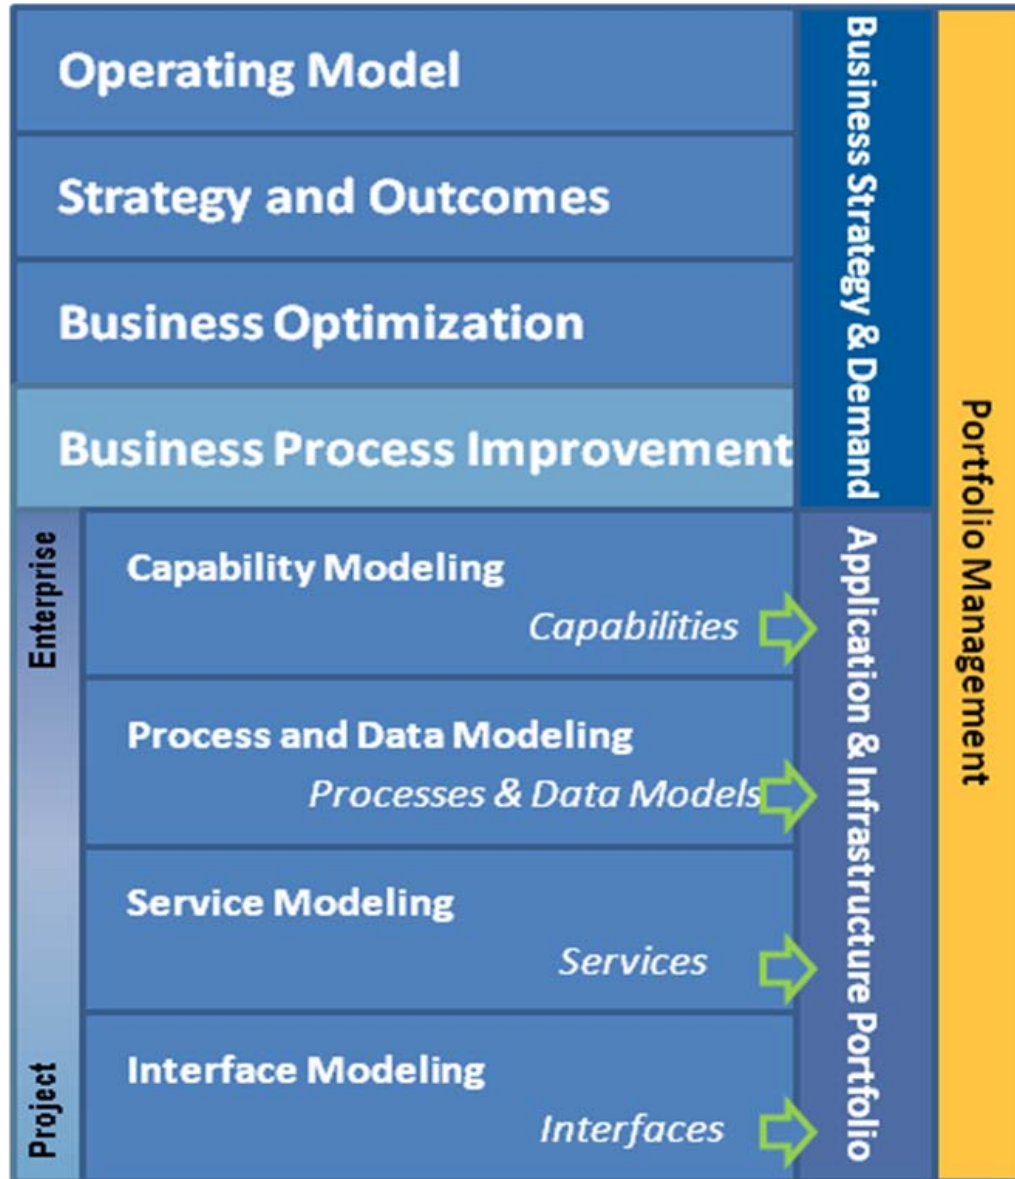

## Burton Group's View of Enterprise Architecture

- Planning, optimization and design discipline
  - Not solely for the *enterprise*
  - *Active* - EA is something you do
  - Focused on *business outcomes*
- Influences IT decision-making
  - Architecture is *personal*
  - EA results in an *architecture* (what gets built)
  - A way to *synchronize* with the business

## Critical success factors

- Trust relationship between IT and business
- Strong leadership
- Wide sphere of influence
- Frequent and regular deliverables
- Tying activities/deliverables to business goals and value
